

Travelex Case Study

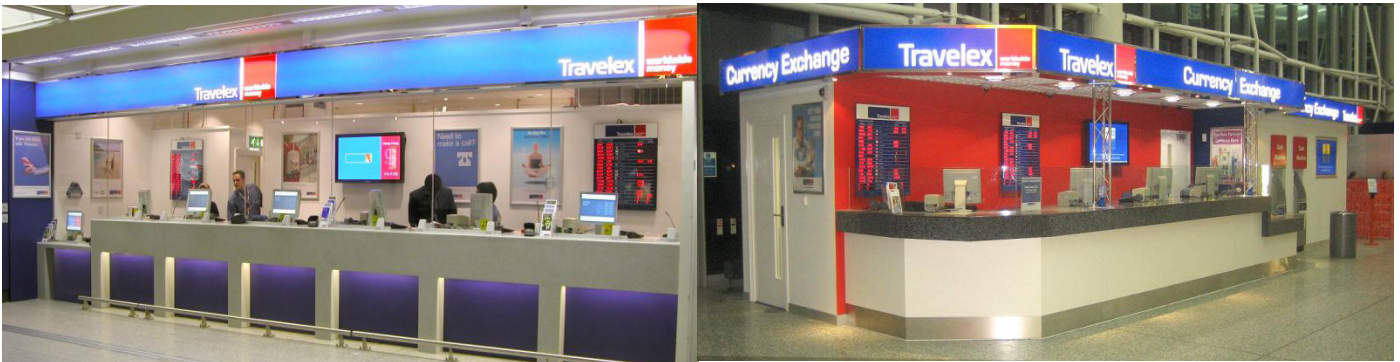

The Brief

Travelex are the market leaders in the Travel Money foreign exchange market with bureaus worldwide. For the past 7 years, Oaktree has regularly assisted Travelex in refurbishing many of their UK airport locations in addition to providing a full 'Design and Build' turnkey service at several new site locations.

The Solution

These are challenging retail environments because of all of the necessary health & safety compliances, security procedures and access restrictions. We have carried out installations for Travelex at virtually every national and international airport within the UK. We have also assisted with other business development programmes which have led to the creation of our 'POD' units which are self-contained, secure trading units. These are suitable for use as additional or temporary trading points which can be operational in less than one day.

"A great bunch of guys to work with, your 'Can Do' attitude was evident in the way your team worked with the BAA engineering team to overcome all obstacles and to complete the task ahead of schedule"

Mr Oliver Simpson, UK Facilities Manager, Travelex UK Ltd
